

Problem statements

DevTools

1. **Agent Observability Bridge** – Integrate the OpenAI Agent SDK with external tracing (Logfire, AgentOps, Braintrust) and normalize spans/events for cross-provider drill-downs.
 2. **ToolRouter Telemetry Hub** – Build a unified dashboard that visualizes ToolRouter calls (success/failure, latency, params) and correlates them with agent decisions.
 3. **Reproducible Agent Evaluator** – Implement weighted scenario evaluation with dependency checks, fixed seeds, and exportable scorecards for CI.
 4. **Cloud Storage CLI via ToolRouter** – Manage S3/GCS/Azure Blob (list/sync/presign/version) entirely through a ToolRouter-backed CLI with audit logs.
 5. **Self-Healing GH MCP** – Ship a GitHub MCP integration that opens PRs when agents detect broken workflows (tests, configs, or missing secrets).
 6. **Autogen Template Loader** – Create an autogen plugin that spins up new agents from YAML templates and auto-wires their ToolRouter tools.
-

Workflow & Orchestration

1. **Resumable Long-Runs** – Create long-running, checkpointed agent workflows with **Temporal + ToolRouter** (retry, resume, and human-in-the-loop steps).
 2. **Event Mesh for Agents** – Use **Kestra** to trigger ToolRouter pipelines from external events (webhooks, cron, file drops) with idempotency and backoff.
 3. **Visual Pipelines** – Connect **n8n** to ToolRouter so teams can design/observe agent pipelines as nodes with typed inputs/outputs and replay.
-

Operations Agents (SMB)

1. **AI Operations Command Center** – Monitor **Gmail, Sheets, Slack** for operational signals, prioritize with LLM reasoning, and auto-orchestrate tasks across **Notion/Trello/Drive** for real-time oversight.
2. **Financial Workflow Copilot** – Reconcile invoices/receipts from **Gmail/Drive**, validate in **Sheets**, flag anomalies in **Slack**, and publish audit-ready summaries to **Notion**.
3. **Customer Lifecycle Intelligence** – Fuse CRM or **Sheets** with **Gmail/Slack** threads, detect churn/upsell via LLMs, notify owners, and update **Notion** health dashboards.

4. **Vendor & Procurement Intelligence** – Aggregate supplier emails into **Sheets**, extract price/ETA trends with LLMs, generate comparative reports in **Drive**, and push prioritized alerts to **Slack**.
 5. **Compliance & Policy Tracker** – Parse requirements from **Gmail/Drive**, maintain a **Notion** control matrix, flag missing evidence in **Slack**, and auto-compile monthly audit packs.
-

Consumer Applications

1. **Chat App Multitool** – Telegram/WhatsApp assistant using ToolRouter for text, image, and PDF queries with streaming answers.
 2. **YouTube Summarization Agent** – YT-DLP + OpenAI + ToolRouter to pull videos, chunk intelligently, and deliver chaptered summaries.
 3. **Market-Sim Agents** – Drive an AI hedge-fund simulation where ToolRouter routes research/analytics agents over live/recorded market data.
 4. **Live Multi-Model Studio** – Integrate LibreChat/LobeChat with ToolRouter to compare/model-route agents in real time.
 5. **OpenPilot Telemetry Board** – Visualize car telemetry with ToolRouter ingestion, searchable events, and anomaly call-outs.
-

Content & Social

1. **AI Social Factory** – Auto-produce and cross-post shorts (e.g., Veo3 + Blotato) with content calendars in **Sheets** and approvals in **Slack**.
 2. **Trend Repurposer** – Turn trending topics into posts/blogs/shorts via ToolRouter; queue in **Notion/Sheets** with A/B variants.
 3. **SEO Auto-Publisher** – Generate and publish SEO posts to WordPress using **Perplexity + OpenAI + ToolRouter**, with internal links tracked in **Sheets**.
-

AI Employees (General)

1. **AI Recruiter Copilot** – Parse resumes from **Gmail**, enrich via LinkedIn APIs, schedule interviews in **Calendar**, and update a **Sheets/Notion** pipeline.
2. **AI DevOps Assistant** – Watch **GitHub** issues/PRs, open **Jira** tickets with summarized context, and notify in **Slack** with runbooks.
3. **AI Engineer Workspace Orchestrator** – Compile release notes by pulling **GitHub** PRs, drafting in **Docs**, and posting to **Slack**.

4. **Customer Feedback Analytics** – Aggregate mentions from Twitter/X and **Gmail**, classify with LLMs, log to **Sheets**, and auto-assign in **Slack**.
 5. **Incident Management Copilot** – On alerts, fetch logs, summarize to **Docs**, create **Jira** incidents, and keep **Slack** threads updated with state.
 6. **Enterprise Knowledge Responder** – RAG over **GitHub**, **Slack**, **Drive** with citations, fallback routing when sources are stale, and guardrails.
 7. **AI Storage Manager** – Audit **Gmail/Drive** usage, surface large/duplicative files, propose retention actions, and execute approvals via **Slack**.
-

Industrial Agents (SMB-focussed)

1. **AI Maintenance Supervisor** – Collect issues from **Gmail/Forms**, classify root causes with LLMs, update a **Notion** board, and post daily digests to **Slack**.
2. **Procurement Intelligence Agent** – Parse supplier emails from **Gmail**, extract to **Sheets**, flag anomalies with LLMs, and draft follow-ups automatically.
3. **Field Operations Orchestrator** – Sync job updates from **Forms/WhatsApp** to **Trello**, store media in **Drive**, and stream progress to **Slack**.
4. **Safety Compliance Auditor** – Extract data from inspection PDFs in **Drive/Gmail**, update **Notion** dashboards, and escalate overdue actions in **Slack**.
5. **Inventory Replenishment Copilot** – Track stock in **Sheets**, forecast depletion via LLMs, update **Notion** reorder plans, and email approvals via **Gmail**.
